GETTING THE BEST FROM ACELEPRYN

YOUR 7 POINT PLAN FOR APPLICATION

1

Apply preventatively. Acelepryn is only effective on 1st and 2nd instar. Larger grubs / larvae will not be controlled.

2

Chafers: Apply once peak flight has been observed (typically June).

Leatherjackets: Adult crane fly activity may not peak until mid-October. Always check peak flight has occurred for application timing.

Sites with historic high pressure have increased probability of re-infestation.

Follow reports of adult activity and record sightings on PestTracker at: www.syngentaturf.co.uk/turf-pest-tracker

3

Mow prior to application.

4

Apply at 0. 6L/ha, in 500-600 litres of water, using a Syngenta XC soil nozzle or suitable air induction 08 nozzle between 2–4 bar pressure.

5

Ensure the soil profile is not hydrophobic at the time of application. Syngenta wetting agent Qualibra is compatible with Acelepryn for convenient application in tank-mix or sequence.

6

Keep surfaces irrigated where possible, to attract pest larvae to towards the surface.

7

Delay mowing for as long as possible and return the clippings if feasible.

USE ACELEPRYN AS PART OF A FULL INTEGRATED TURF MANAGEMENT STRATEGY, THIS CAN INCLUDE NEMATRIDENT BENEFICIAL NEMATODES

HIGH AND MIXED POPULATIONS WILL NEED A LONG TERM PROGRAMMED APPROACH

Follow #PestTracker for timing information support and @SyngentaTurfUK for turf management advice.
