BlocCade™

A robust physical barrier that prevents fungi and bacteria from infecting plant wounds.

BlocCade is a physical coating for protecting plant wounds against infections caused by bacteria and fungi, such as *Eutypa, Botryosphaeria* and *Nectria* (e.g. fruit tree canker and dead arm disease).

Once applied BlocCade dries quickly to form a protective shield.

- **Exempt from pesticide regulations (EU decision October 2014)**
- **Only one application required.**
- **Effective in preventing infection.**
- **Long life.**

BlocCade is an ideal product for use in Viticulture where annual pruning means an ever present disease threat. Application with the Felco-19 pruning shear with integrated spray nozzle.

BlocCade™

BlocCade is a physical coating for protecting plant wounds against infection caused by bacteria and fungi such as *Eutypa, Botryosphaeria* and *Nectria* (e.g. fruit tree canker and dead arm disease).

BlocCade must be applied directly to the plant wound.

BlocCade is most effective when applied immediately after pruning.

APPLICATION:
Shake well before use.
Mix one part of **BlocCade** to nine parts water.
Apply **BlocCade** immediately after pruning to the wound and the area around it ensuring that the entire wound is covered. This results in an air tight shield that protects the plant from infection.

BlocCade dries in 5 to 45 minutes.

Apply **BlocCade** in dry frost free weather.

BlocCade can be applied with a knapsack sprayer, orchard sprayer, a sprayer device on the 'Felco-19' pruning shear and by brush.

If applied by spraying use a fine spray nozzle and ensure thorough coverage.

For optimum results when spraying use a non-ionic surfactant.

Diluted **BlocCade** has a limited shelf life of 24 hours. Clean application equipment by rinsing with water.

Dried **BlocCade** can be removed with a solvent such as nail polish remover.

STORAGE:
Store **BlocCade** at room temperature and protect from frost.
