- ✓ Harmless to people, pets & the environment

750ml e

GRAZERS

EFFECTIVE AGAINST DAMAGE FROM
RABBITS, PIGEONS & DEER

Strengthens and stimulates plant growth safely and effectively!

Directions

- Shake well; twist nozzle to fine spray; squeeze trigger firmly.
- Spray all vulnerable, edible and ornamental plants in your garden.
- Seedlings under protection are very tender and prone to scorch from using any spray product. Harden off young plants by bringing outside gradually over a week or more before spraying.
- Spraying monthly is effective against damage and benefits the plant. It is safe to spray more frequently, if for example, damage persists, prolonged heavy rain follows spraying or if plants are watered overhead.

NOTE: New plants being introduced to the garden are especially vulnerable to damage. Spray the day before planting and again once planted.

Instructions

- Hold 20cm away from the plant and spray all foliage including underside.
- Spray until droplets start to run off.
- Do not spray if rain is expected within the next hour.

Do not mix with other products. Leave for 3 days before or after any other spray applications.

Precautions: Keep away from children; in the event of spray contact with eyes wash thoroughly with water if symptoms persist seek medical advice.

Storage: Will keep for 2 years in cool, dark conditions.

Harvest interval: 1 week (in case of slight risk of taint).

Grazers contains a special food grade calcium chloride solution - 10% CaO and other minor nutrients in a ready to use solution with water. (Grazers does NOT contain any animal by-products).
