KATOUN® GOLD

BELCHIM CROP PROTECTION

KATOUN® GOLD

An emulsifiable concentrate formulation containing 500 g/L fatty acid pelargonic acid.
MAPP no. 17879

Katoun® Gold is a natural weed management solution. Its active ingredient, pelargonic acid is of natural origin and is found in plants. It quickly degrades into natural elements, and has no residual action

- Fast results - contact effects can be visible in 2 hours
- Easy to apply with a low dose rate per hectare
- Low application rate when compared to other herbicides - less handling and storage

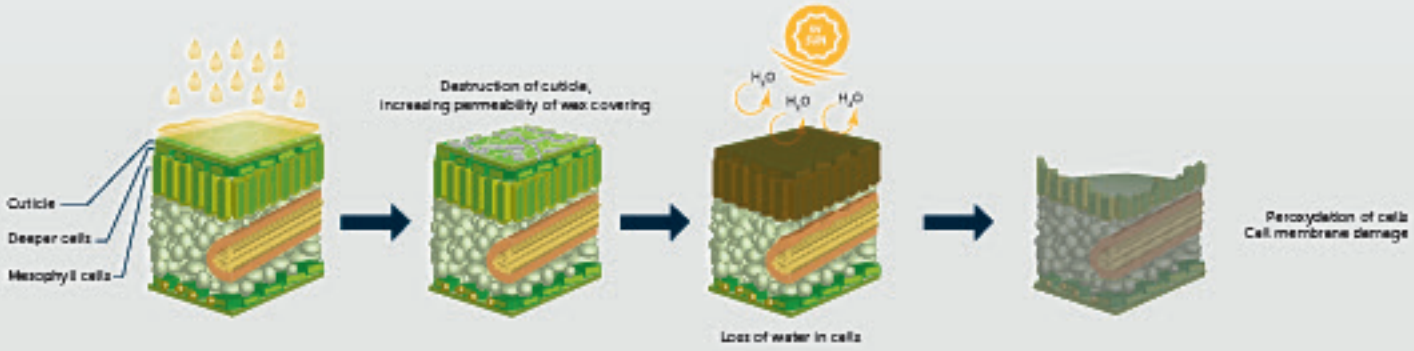

Mode of action

Pelargonic acid is found in plants and naturally dries out weeds.

Destruction of the cuticle, damaging the cell membrane and causing dehydration within hours.

Positive environmental profile

Katoun® Gold has a very high purity with >95% and is a natural product produced from a plant origin, offering a low rate of use @ 22.5L/ha, when compared to other alternative methods like mechanical weeding, burning or foam. Katoun® Gold has many advantages, fast, no noise, no fire risk and no structural damage.

PLANT ORIGIN

KATOUN® GOLD

The number of knapsacks required to apply an application to 10,000m² or 1 hectare

Acid herbicides

For best results apply with this nozzle combination below:

- Katoun Gold should be applied with twin even spray 0.15 green nozzles and an Excel regulator. The twin nozzle assembly only fits directly onto the lance elbow so the regulator should be fitted at the handle end of the lance.
- LPM 0.710ml
- Up to 0.5 width
- This combination at 0.5 metre spray width will apply 225 litres at a forward speed of 3.8kph (1m/sec)

An FCX0.2 nozzle may be appropriate to use for shrub bed application

Flexibility of use

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec

Katoun® Gold can be used at any time of year, the optimum time of year is in orange

Use Plant Protection Products Safely. Always read the label and product information before use
