Solufeed Rapid

Speciality high performance liquid formulation of Fe EDDHSA

EC FERTILISER
A liquid formulation of sodium ferric ethylenediamine bis-(2-hydroxysulphonyl acetate) (FeEDDHSA Na) containing:

Water soluble Fe:	2.0 %
Fe chelated by EDDHSA:	2.0 %
Fe chelated by o-o EDDHSA	1.9 % minimum
Practical pH stability range:	4 – 9 (in aqueous solution)

To be used only where there is a recognised need.
Do not exceed the appropriate dose rate.

USES:

- For the speedy, 'emergency' correction of iron deficiency when symptoms appear in a growing crop.
- As an efficient iron source in hydroponics and fertigation systems particularly where low pH stock tanks are employed.
- A high performance iron chelate to prevent and correct iron deficiency in most, horticultural and ornamental crops growing in high pH conditions.

1 litre
Packed 12 x 1 litre per outer
Specific gravity 1.32

95% ortho-ortho isomer

DIRECTIONS FOR USE:

Emergency remediation of iron deficiency
For ornamentals, nursery stock and similar crops apply a drench containing 25 mls Solufeed Rapid per 100 litres of water. Repeat up to three times at 5 – 7 day intervals or until symptoms improve. Thereafter revert to the normal feeding regime but keep monitoring the crop.

Hydroponics/fertigation nutrient solutions
1ppm (17.86mmol/l) iron can be achieved by adding 39 mls of Solufeed Rapid per 1,000 litres of final feed solution.

Soil application
Please refer to our Technical Data Sheet available from the address below.

Precautions
Wash hands before meals and after work.
Avoid contact with eyes.
Store in the original container, tightly closed, in a dry place.
Store away from children, pets, livestock and foodstuffs.
MSDS data is available to professional users upon request.
