## The perfect base for peat free growing media

With over 50 years' experience of producing consistent high quality professional growing media, iCL has been the go-to supplier for growing media for decades, not only because people trust their products to provide them with the best results, but also because of the constant research and development that goes into making sure their growing media remains on top of its game.

The Levington Advanced Sustain range of growing media contains the finest ingredients, which have been developed and tested over time to provide mediums which your plants will love to grow in.

Manufactured from FSC certified raw material, Fibagro Advance is created from wood chips which are thermo-mechanically processed. During this process the wood chips are put through extremely high temperatures allowing unwanted substances to escape as gas, ensuring that Fibagro Advance is free of any kind of chemical or physical additive and is sterile.

### **100% NATURAL AND BIODEGRADABLE**

Fibagro Advance degrades after use, without any residues.

### **HEALTHY AND RELIABLE**

The defibration process ensures a safe, constant quality with structural stability.

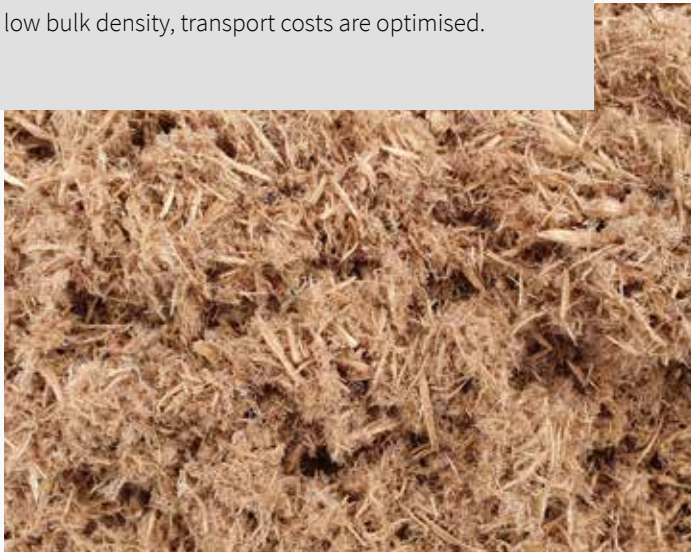

### **ECONOMIC**

Fibagro Advance is a fully renewable raw material which utilises a by-product of the timber industry sourced from sustainable forests. Moreover, Fibagro Advance is compressible and due to its low bulk density, transport costs are optimised.

## **Advantages of using Fibagro Advance**

- Reduced nutrient leaching
- High Air-Filled Porosity for good rooting and drainage
- Improved Water Holding Capacity making it easier to manage plants throughout
- Great structure that doesn't allow the mixes to 'slump' in the pots
- Manufactured in the UK for the professional horticultural market
- Has a stable nitrogen profile
- Fully sterilised - heat treated
- Manufactured from UK FSC certified and sustainable raw materials
- Combined with the strong nutrition packages of ICL, Fibagro Advance can be used in high percentages in mixes providing a robust and cost-efficient diluent of peat
