

Control the Box Tree Caterpillar using Box T Pro Press

Box T Pro Press is an innovative bio-control mating disruption system for managing box tree caterpillar *Diaphania perspectalis*. The easy-to-use product contains a unique highly concentrated female pheromone that inhibits the ability of male moths to find a female for mating.

As a result, egg laying is reduced and the subsequent number of defoliating caterpillars significantly decreased. Box T Pro has proven to be highly successful in reducing damage to box trees in trials across Europe and the UK.

KEY BENEFITS

Long-lasting high-performance diffusion

The microencapsulated formulation of pheromone, vegetable oil and natural wax allows for a controlled release of the pheromone for 3 months. This means less maintenance and better protection of box trees.

Easy to use

Box T Pro Press is supplied in pouches and applied using the dedicated Phero pump applicator. The pheromone is precision applied in a 1.5 cm dose on the trunk or the nook of the branches making it very safe and practical to apply.
